### Off-Road Motorcycles

Designed for years of service even in the dirtiest riding environments

OE Spacers typically wear out within a year of hard riding.

OE wheel spacers should be checked and replaced as needed with every time the bearings are serviced

Water and dirt act as a grinding compound between the seal face and the mating surface of the spacer

Once the grooves are deep enough, the sealing surface is lost allowing water and dirt to pass through and contaminate the bearing

The AB aluminum spacers feature a hardened steel shell pressed over the aluminum to provide superior wear surface

The AB steel spacers are manufactured with 52100 bearing steel that is through hardened and precision ground and plated for years of service
